

CTI Technology Will Find Your Cybersecurity Blindspots And Mitigate Your Major Risks

Are you sure your business is secure?

Depending on the current state of your digital defenses, improving your security may not be all that complicated or expensive. You can start by following these five simple tips...

5 Tips To Enhance Your Cybersecurity Right Now

Multi-Factor Authentication: MFA enhances login security by requiring the user to utilize two methods to gain access.

Computer Updates: Keeping your computers up-to-date protects you against identified vulnerabilities.

Third-Party Spam Management: A reliable third-party spam filter provides protection against email based threats like phishing.

Backups Tested and Reviewed: A comprehensive and regularly tested backup solution will defend you against ransomware and general data loss.

Employee Security Awareness Training: Security awareness training helps your employees learn to recognize and avoid scam emails and websites.

CTI Will Help You Verify Your Cybersecurity Capabilities

Are you sure your business is secure? It's a dangerous assumption to make — don't you think you should find out before a cybercriminal finds out for you?

If you would like a **FREE cybersecurity risk assessment** to help you discover and address your vulnerabilities, get in touch with **CTI Technology** today.

We will examine your cybersecurity from end to end and produce a detailed report to help you mitigate your blindspots and develop confident security.
